Profile

I am a senior software engineer specializing in native iOS development, mobile architecture, application modernization, backend services, cloud infrastructure, and AI-powered software solutions. My experience spans enterprise mobile applications, independent product development, RESTful APIs, authentication systems, cloud deployments, and intelligent automation. I help companies modernize existing applications, solve complex engineering challenges, and build scalable digital products. My long-term career objective is to advance into AI engineering leadership while continuing to deliver sophisticated mobile and full-stack solutions.

Technical expertise

Native iOS & Apple Ecosystem

Swift / SwiftUI / UIKit / Objective-C / Foundation / Combine / Swift Concurrency / Core Data / SwiftData / CoreBluetooth

Software Architecture & Engineering

MVVM / MVC / Modular Architecture / Dependency Injection / Protocol-Oriented Programming / SOLID / Design Patterns / RESTful API Design / Client-Server Architecture / Asynchronous Programming

Backend Engineering

Python / FastAPI / Uvicorn / PostgreSQL / SQL / Firebase / Cloud Firestore / REST APIs / JSON / JWT Authentication

Cloud Infrastructure & DevOps

Google Cloud Platform / Cloud Run / Secret Manager / Firebase Authentication / Cloud Firestore / Firebase Cloud Messaging / Cloud Pub/Sub / Cloud SQL / Neon PostgreSQL / Git

Artificial Intelligence & Automation

OpenAI API / LLM Integration / Prompt Engineering / NLP / AI Summarization / AI Content Generation / Workflow Automation / AI Feature Integration / Python AI Services

Authentication, Security & Privacy

Sign in with Apple / Google Sign-In / Firebase Phone Auth / OAuth 2.0 / JWT / Refresh Tokens / Didit KYC / Liveness Verification / Signed Webhooks / Keychain

Integrations & External Services

Apple Authentication Services / Google Sign-In / Gmail API / Google Calendar API / Google OAuth / Firebase Authentication / Firebase Cloud Messaging / Google Cloud APIs / OpenAI API / Didit API

Development Tools

Xcode / Visual Studio Code / Git / GitHub / Claude Code / OpenAI Codex / Postman / Google Cloud CLI / Firebase Console / GitHub Actions

Engineering consulting

iOS modernization · Production troubleshooting · Mobile architecture · Backend and cloud integration · Practical AI features · Release engineering

Professional experience

Enterprise mobile engineering • Current and recent roles

TQL (Total Quality Logistics)

Senior iOS Developer | Nov 2023 – Present | Remote

Lead modernization efforts across enterprise logistics applications, transitioning legacy UIKit codebases to modern SwiftUI implementations while improving performance, maintainability, and developer productivity.

- Led migration from MVC architecture to MVVM, significantly improving scalability and testability.
- Implemented modern asynchronous programming using Async/Await, Combine, and PromiseKit.
- Developed and delivered new Swift-based features supporting logistics operations.

Swift / SwiftUI / UIKit / Combine / Async/Await / XCTest / Azure DevOps / Bitbucket

Home Depot

Senior iOS Developer (Contract) | Oct 2024 – Mar 2025 | Remote

Modernized a large-scale internal iPad application through extensive refactoring and architecture improvements.

- Migrated legacy Objective-C codebases to Swift.
- Transitioned UIKit screens to SwiftUI.
- Improved maintainability through modular architecture.

Swift / SwiftUI / UIKit / Objective-C

American Family Insurance

Senior iOS Developer | Feb 2023 – Oct 2023 | Apex Systems · Remote

Designed and delivered customer-facing insurance features while supporting enterprise mobile modernization initiatives.

- Built scalable Swift-based features for policyholders.
- Improved application stability and performance.
- Collaborated with product, design, QA, and backend teams.

Swift / UIKit / SwiftUI / REST APIs

Universal Orlando Resort

Senior iOS Developer | Feb 2022 – Feb 2023 | Apex Systems · Remote

Contributed to the MagicBand Watch initiative, leveraging biometrics and secure authentication to improve guest experiences across the resort ecosystem.

- Developed biometric-enabled guest access experiences.
- Integrated Touch ID, NFC, and secure authentication workflows.
- Implemented encryption strategies for sensitive guest data.

Swift / SwiftUI / UIKit / Objective-C / NFC / Biometrics / XCTest

Experience & education

Enterprise contributions are separate from the product portfolio on the following pages.

Staples

Lead iOS Developer | Feb 2020 – Feb 2022 | Remote

Led development of two major customer-facing initiatives: Native Shipping and the Staples Loyalty Program.

- Architected and launched the Staples Loyalty Program.
- Built Native Shipping functionality integrated with UPS systems.
- Led migration from Coordinator architecture to MVVM.

SwiftUI / UIKit / Swift / REST APIs / Xcode Instruments / CI/CD

TQL (Total Quality Logistics)

iOS Developer | Jul 2019 – Jan 2020 | Remote

Developed and enhanced logistics-focused mobile applications supporting carrier operations.

- Built new Swift and Objective-C functionality.
- Optimized application performance.
- Collaborated with cross-functional teams.

Swift / Objective-C

Cognizant / TriZetto

iOS Developer | 2018 – 2019 | Additional experience

Enterprise mobile development engagements, including Capital One initiatives.

iOS / Enterprise

Education & training

.NET Full Stack Engineer Program

BrainStation | 2021

iOS Development Bootcamp

BrainStation · New York, NY | 2017

Linux+ & Network+ Certification Training

Cybrary | 2019

Startup advisory & product engineering

Product discovery · MVP roadmapping · Architecture · Hands-on development · Engineering operations · Launch readiness · Fractional technical leadership · Technical due diligence

Fractional technical leadership is an offered engagement, not a claim of previous CTO employment. Technical readiness reviews do not replace legal, regulatory, security-audit, or compliance advice.

Selected product work

Public portfolio • Development, implemented capabilities, and planning are distinguished below.

Unbound

Independent Product / Full-Stack Mobile Engineering | Active development — pre-public launch

Unbound is a privacy-first mobile dating and social discovery platform built around user-controlled visibility, identity verification, and secure connections.

Unbound is not publicly launched. Some production integrations and operational readiness checks remain in progress.

Swift / SwiftUI / Python / FastAPI / PostgreSQL / Google Cloud Run / Firebase Auth

InboxIA

AI-Powered Productivity / Full-Stack Application | Independent development project

InboxIA is an AI-powered email and productivity platform integrating Gmail, Google Calendar, and intelligent backend services to simplify communication and scheduling workflows.

Implemented capabilities are described as they stand; not all planned mobile features are publicly available.

Swift / SwiftUI / Python / FastAPI / Cloud Run / Gmail API / Google Calendar API

NearFind

Native iOS / Bluetooth & Apple Ecosystem | Independent development project

NearFind is an Apple ecosystem application exploring proximity-based device discovery, Bluetooth Low Energy communication, privacy-preserving device identification, and nearby-device experiences.

Not compatible with proprietary Apple AirTag or Tile tracking protocols. Proposed hardware accessories are not commercially manufactured products.

Swift / SwiftUI / CoreBluetooth / Ultra Wideband / Core Location / CloudKit / SwiftData

EventCue360

AI Automation / Business Platform | Business platform in planning

Event-services and coordination platform in planning. Growth Engine, Campaign Builder, Studio, Analytics, and Referral Partner Program are roadmap components, not implemented software.

AI Automation / Workflow Design / Platform Planning / Event Services

Events2Nite

Native iOS / Event Discovery | Demo recording available; app details unpublished

Events2Nite helps a group decide where to go tonight: it ranks nearby venues and events against your vibe, budget, and who is free, without the group-chat back and forth.

No public repository or App Store listing is published; this description is based on the recorded demo.

iOS / MapKit / Core Location / Event Discovery / Group Planning

Earlier work

Brokerage Management Platform: Exploration into brokerage and investment management workflows. Documented as earlier work; no verified case-study details are published.

AI Calendar & Scheduling Assistant: An early exploration of AI-assisted scheduling that informed later work on InboxIA. Documented as earlier work; no verified case-study details are published.

More product work

Native iOS applications, earlier work, and founder support

Vectrip

Enterprise Travel Platform / Native iOS | Traveler companion client

Vectrip is a corporate travel platform. This native iOS application is the traveler companion — the employee-facing side of a system that also includes an administrative dashboard.

iOS / Corporate Travel / Magic Link Authentication / Expense Tracking / Enterprise Workflow

SocialMedia

Independent iOS Application | Independent development project

SocialMedia is an iOS app built with SwiftUI that allows users to share, interact, and engage with audio content such as voice notes, podcasts, and audio diaries.

SwiftUI / Swift / AV Foundation / MVVM

InAppOrdering

Independent iOS Application | Independent development project

The InAppOrdering app is a robust solution for ordering food and drinks, with a strong focus on user location and convenience. It offers a variety of features for a seamless ordering experience, including location-based store searches, a comprehensive menu system, user profile management, and an integrated shopping cart.

SwiftUI / CoreLocation / MapKit / Core Data / MVVM
